

## Centre of Excellence Development

### Business Planning and Implementation Services

For over 10 years, Beta has been involved in developing the business case and implementation of a number of technology based centres of excellence around the UK. We have worked with a number of regional and national public sector organisations, and engaged a range of stakeholders including large multi-nationals, SMEs, academia and research organisations to deliver sustainable centres of excellence in areas including metals, low carbon technologies and nano-technologies.

#### Centre Development:

- Developing and testing the aims of the centre including vision development and mapping existing provision and sector needs.
- Engaging stakeholders and developing technical networks to support the centre.
- Detailed business planning, including securing public and private funding.

#### Centre Implementation:

Beta can also provide consultancy support to existing centres of excellence on business development, access to public funding and sustainability planning.
